

Arun R

Backend Software Engineer

Java · Multi-Tenant SaaS · Distributed Systems · LLM-Powered Developer Tooling · 3+ yrs

Backend engineer at **Zoho Desk** owning critical-path APIs in a multi-tenant SaaS (**100K+ tenants**). Shipped an AI refactoring agent that cut legacy-code migrations by **~95%**, a delta-write rewrite that dropped hot-path latency by **40%**, and owned the **OWASP ZAP CI/CD security rollout** — mentoring 4 engineers through it.

Experience

Zoho Corporation — Zoho Desk · Backend Software Engineer

Jun 2023 – Present

Java · REST APIs · MySQL · Redis · Multi-tenant SaaS · Event-driven · OWASP ZAP · CI/CD

- Shipped an **AI refactoring agent (Claude API)** that cut legacy-component migration from **~2 months to 2–3 days (~95% faster)**; now the team's default tooling for decoupling work and requested on-demand across Zoho Desk. Replaced a chunk-commit workflow that previously required weeks of cross-team conflict resolution.
- Re-architected configuration persistence from full-snapshot to **delta-based writes** on a hot-path API hit during every Desk session init across **100K+ business tenants**; cut **average latency 200ms → 120ms (–40%)** and **DB write volume by 60%**. Validated across internal APM, load benchmarks, and senior review.
- Owned the **integration of Zoho Canvas** (tenant-configurable UI layout engine) into Desk's ticket-detail path; **designed the entity-relationship DB schema** mapping Desk entities to Canvas configs, wired the framework into Desk, and consumed Canvas APIs for layout retrieval. Led cross-team onboarding with the Canvas team; pre-GA rollout via corp portal.
- Owned** the rollout of **OWASP ZAP (DAST) into CI/CD** as a pre-deploy security gate across the Desk codebase; **mentored 4 engineers** through the integration and caught **30+ pre-production vulnerabilities** (XSS, SQLi) before release. Independently reported **3 validated findings** (incl. Broken Access Control) via Zoho's internal bug bounty.

Projects

AI-Assisted Test Review Plugin · Java · Eclipse Plugin SDK · Claude API

- Eclipse IDE plugin that grades JUnit tests against team coding standards via Claude API, emits structured review reports, and surfaces violations inline in the editor — cuts manual test-review effort across the team.

Real-time Notification Service · Java · Redis Pub/Sub · WebSockets · Async

- Event-driven fanout service delivering real-time notifications over WebSockets; Redis pub/sub for multi-subscriber broadcast and message persistence with at-least-once replay. Handles slow consumers via bounded queues and backpressure.

Distributed Key-Value Store · Java · WAL · Snapshot Recovery · Consistent Hashing · Raft

- Persistent KV store with **write-ahead log + snapshot-based recovery**, consistent-hashing sharding across nodes, and **Raft-style replication** for leader election and log replication. Benchmarked durability under kill-9 and restart scenarios.

Skills

Languages	Java (primary), SQL, JavaScript
Backend	REST API Design, Microservices, Event-Driven Architecture, Multi-Tenant SaaS, Concurrency (thread pools, locks, async), Design Patterns, Caching Strategies
Frontend	React, JavaScript (shipped ~40% of day-to-day work on client-side)
Data & Infra	MySQL (schema design, query optimization), Redis (pub/sub, caching), Firebase
DevOps & Security	Git, CI/CD, JUnit, OWASP ZAP (DAST), Eclipse Plugin SDK, Secure-by-design API patterns
AI / LLM	Claude API, LLM-powered developer tooling, agentic pipelines (parsing → decoupling → validation → test generation)

Education

Government College of Engineering, Salem

2019 – 2023

Bachelor of Engineering · CGPA 8.83 / 10
